Re: World Trade Center - Contract WTC-110.00
Insulation

Gentlemen:

Since transmitting my letter of April 6, 1970, relating to the insulation on the underside of the 41st and 43rd floor slabs, I have been advised by our Construction Manager that this work is scheduled to be performed on April 11th.

In view of the criticality of accomplishing this work, if you are satisfied that you will, as promptly as possible, be able to furnish written confirmation that: 1) the insulating value of Cafco is equal or better than that of Styrofoam, 2) the material will remain in place after application without significant "dusting" (to include a sealer coat which will eliminate dusting), 3) the installer will take appropriate steps during application to control excess material within the structure, then you are authorized to utilize the material.

We will, of course, expect you to furnish to us the data outlined above as soon as possible.

PLAINTIFF'S EXHIBIT
1 PX-5606

Very truly yours,

James R. Endler
Vice President
